

TOMATO COSSACK TECHNICAL INFORMATION

Crops in 68 days

Sowing:

Sow in late winter for heated greenhouse cultivation or early spring for the cold greenhouse. Sow 6mm deep in a good compost. Germination usually takes 6-14 days at 24C (75F).

Growing:

Transplant the seedlings when large enough to handle in to 8cm pots and grow on in good light and cooler conditions. When 15-23 cm (6-9in) tall plant out 45cm (18 in) apart in a prepared greenhouse border soil, growbag, 23cm (9in) pots or ring culture. Remove side shoots as they appear and pinch out the growing points when 5-7 trusses have been formed.

Feed regularly once the first truss has set.
