

CUCUMBER CRYSTAL LEMON

Sturdy disease resistant vines produce an abundance of lemon shaped cucumbers. Easy to digest and never bitter, they can be eaten out of the hand like an apple.

Variety is rust and drought resistant. Ideal for growing outdoors in warmer areas or in a greenhouse.

Thrives in rich soil. Sow in pots late April and plant out in June or sow outside late May/June. Germinate in a temperature 75°f. When leaves develop reduce temperature to 65°-70°.
